ELSEVIER

Toxicology 137 (1999) 201–202

TOXICOLOGY

Contents of volume 137

Articles

Acetaldehyde increases the activity and gene expression of urokinase type plasminogen activator in a hepatic stellate cell line
L. Rodríguez-Fragoso, R. Alvarez, J.A. Reyes-Esparza, M.E. Garcés (Mexico) 1–11
A possible mechanism involved in cirrhosis of the liver

Cadmium-induced testes oxidative damage in rats can be influenced by dietary zinc intake
P.I. Oteiza, V.N. Adonaylo, C.L. Keen (Argentina, USA). 13–22
Zinc deficiency increases testicular sensitivity to cadmium-mediated free radical damage

Effect of cisplatin and 6-bromo-6-deoxy-L-ascorbic acid on some biochemical and functional parameters in mice
V. Šverko, M. Radačić, M. Gavella, V. Lipovac, I. Ljubenkov, M. Eckert-Maksić (Croatia) 23–34
A derivative of vitamin C seems to reduce cisplatin toxicity

Acute immunotoxicity of *p*-chloronitrobenzene in mice: II. Effect of *p*-chloronitrobenzene on the immunophenotype of murine splenocytes determined by flow cytometry
Q. Li, M. Minami, T. Hanaoka, Y. Yamamura (Japan). 35–45
B and T cells, T cell subsets and NK cells decreased whereas macrophages increased in exposed mice

Comparison of detection sensitivity of immuno- and genotoxicological effects of subacute cypermethrin and permethrin exposure in rats
L. Institóris, Ü. Undeger, O. Siroki, M. Nehéz, I. Dési (Hungary, Turkey). 47–55
Permethrin had no immunotoxic effect while cypermethrin decreased DTH. Both compounds increased chromosomal aberrations

Toxicology Contents Alert 57–67

Instructions to Authors 69–70

Articles

Dietary β-carotene protects lung and liver parenchyma of rats treated with monocrotaline
Beta carotene decreases inflammation in the lung and prevents hemorrhaging and fatty infiltration in the liver
R.C. Baybutt, A. Molteni (USA) 69–80

An in vitro and in vivo study of some biological and biochemical effects of Sistrurus Malarius Barbouri venom
The venom causes many neurological and metabolic effects in rats
A.-A. Assi, H. Nasser (Egypt). 81–94

Strain-dependent disposition of inorganic arsenic in the mouse
Stains examined were C3H, C57B1 and B6C3F1
M.F. Hughes, E.M. Kenyon, B.C. Edwards, C.T. Mitchell, D.J. Thomas (USA) 95–108

Acute moderate hypoxia reduces ethanol elimination in the conscious rabbit
Some possible underlying mechanisms are discussed
J. Gavalakis, P. du Souich, M. Sharkawi (Canada). 109–116

Time- and dose-dependent digoxin redistribution by digoxin-specific antigen binding fragments in a rat model
The longer the time interval between intoxication and digoxin-specific Fab administration the higher the dose
C. Renard, E. Weinling, B. Pau, J.-M. Scherrmann (France) 117–127

Toxicology Contents Alert 129–136

Articles

Lack of promotional effects of groundwater contaminant mixtures on the induction of preneoplastic foci in rat liver
Mixtures included arsenic, benzene, chloroform, chromium, lead, phenol and trichloroethylene
S.A. Benjamin, R.S.H. Yang, J.D. Tessari, L.W. Chubb, M.D. Brown, C.E. Dean, T.J. Keefe (USA) 137–149

Effects of pretreatment with cytochrome P-450 inducers, especially phenobarbital on triphenyltin metabolism and toxicity in hamsters
Phenobarbital treatment suppresses the diabetogenic action of triphenyltin
S. Ohhira, H. Matsui, K. Watanabe (Japan) 151–159

Chelation therapy in aluminum-loaded rats: influence of age
Three different chelators were tested in old and young rats
M. Gómez, J.L. Esparza, J.L. Domingo, P.K. Singh, M.M. Jones (Spain, USA) 161–168

Protein binding of mercury in milk and plasma from mice and man — a comparison between methylmercury and inorganic mercury
Both forms of mercury are differentially bound to the major protein fractions and transferred into milk as albumin ligands
J. Sundberg, B. Ersson, B. Lönnerdal, A. Oskarsson (Sweden, USA) 169–184
